Christian Brothers Services (CBS) is a full service provider which offers a wide-range of products and services to assist any size organization in improving its utilization of information technology. We maintain website design & development and IT operations teams with decades of combined experience. We can help find the right mix of products and services to meet your requirements so you can focus on your own organization's mission.

Hosted website content management system

“As soon as we engaged your website services team to operate our website they quickly got to work and developed our current website using the input we submitted. I feel you quickly entered into our charism and created a website more in keeping with Presentation charism than we could have, even if we had the technical expertise.”

Sister Katherine Fennell
Union of Sisters of the Presentation of the Blessed Virgin Mary

The Christian Brothers Services Content Management System (CMS) is an asset to everyone who has the responsibility of managing the content of your organization's website. Our CMS allows the administrator or content manager the ability to securely add, edit and publish content to your website, helping to keep it well maintained, up-to-date and relevant.

Christian Brothers Services created Website Update Express as a customizable (CMS), one which allows you to easily maintain the content of your website using any current web browser, with no need for third party software. It also eliminates the necessity of webmaster expertise. Using our CMS, a site administrator can also create new pages, add or remove menu subsection pages and redirect any page to any active web address or URL.

Additionally, our CMS Image Manager functionality allows for the inclusion of images, PDF files, Word documents, video and more to your website. Christian Brothers Services can further customize your CMS to include a variety of valuable features including a save-as-draft function, interactive calendar, updateable news section, photo galleries, email subscription and much more. Our website developers can also add custom-developed features to meet your special requirements and specifications, if necessary.

Content Management System (CMS) allows you to easily:

- Add, edit and maintain content on your website
• Easily publish changes
• Create new pages
• Add sub-menu items to the main menu items
• Add, organize and maintain photos and files
• Create links
• Distribute information prior to the next board meeting

Successfully presenting your story and mission through your website takes a great deal of planning and creativity. You're not only sharing information, but also developing a personal image. Christian Brothers Services (CBS) will collaborate with you to create a graphically stunning and easy to navigate website that's tailored to fit your needs.

Whether you're looking to design a new website or update your current one, CBS is your leading resource in website design, development and hosting.

Website Design/Redesign – A great end-user experience is the key to a successfully designed website. Our design and production team provides the same high-level of creativity and technical experience you'd expect to see from a much larger and more expensive advertising agency.

Website Hosting – Our state-of-the-art hosting and data center, combined with our knowledgeable customer support staff, will provide you with the service and support you expect.

E-Commerce – All the benefits of an online store.

Social Networking – Get your name out there via Facebook, Twitter, WordPress, Message Boards and more!

Multimedia – Use YouTube, Podcasts, RSS feeds, Flash PDF's and more to grow your organization's website traffic.

Website Analysis – We will provide a custom website analysis based on six criteria including: Design / Navigation / Readability / Content / Cross-browser and Devise Platform / Scalability.

Database Development – Databases allow you to expand and control the data on your website without the need to create separate pages. This can also include calendars, bulletins and membership databases.

Advertising and Marketing – Online advertising and marketing is a proven method to increase traffic to your website.

Web Conferencing – Create instant collaborative meetings with just a web browser and the Adobe Flash Player.

Web Sharing – Manage, grow and collaborate with QuickR, the fastest way to share everyday organizational content with your team.

"CBS created a secure website portal for our members to login to view property/ casualty data from our back-office system and to submit transactions based on our requirements. This has greatly improved customer service while reducing our transaction processing costs."

XpressIT™ Board Portal Xpress

Hosted board portal content management system

"The Board Portal has given us the means to simplify access to information for board members while also reducing printing and shipping costs and serving as an important communication conduit to board members all year long."

Brother Michael Quirk, FSC
Christian Brothers Services

Christian Brothers Services (CBS) XpressIT Board Portal is a web-based hosted solution that makes board and committee communication easy, efficient and secure!

XpressIT Board Portal provides directors and committee members instant, secure, 24-hour access to all important documents and materials. Information in the portal is conveniently organized on a dashboard that displays recent updates and activities.

Administrators manage committees, documents, calendar items and members all in a secure environment. User settings and permissions are easily managed from a centralized administration console.

The XpressIT Board Portal can be customized to reflect your organization's logo and color scheme. Our website developers can also add custom-developed features to meet your special requirements and specifications, if necessary.

XpressIT ...

to save on printing and binding costs, mail and courier services to reduce paper waste.

Directors XpressIT to:

- Receive board packets electronically
- Receive notification when new material is posted
- Search for and retrieve important information
- Have secure instant access to necessary documents

Administrators XpressIT to:

- Reduce time spent on board administration duties
- Manage and deliver documents through a secure web-based portal
- Reduce the need to print and mail sensitive documents
- Distribute information prior to the next board meeting

Christian Brothers Services (CBS) is a private enterprise cloud service provider, which means we can help you to relocate your on-premises hardware and software from your data center to ours to gain benefits.

Taking advantage of cloud services can simplify an organization's on-site IT by off-loading their IT burden, in part or whole, onto another organization allowing them more time and resources to focus on their own mission. This can result in reducing the cost and complexities involved in managing and maintaining your own data center infrastructure, hardware as well as software applications.

We offer three main types of cloud services: public, private and hybrid.

Public clouds are generally suited to providing consumer cloud-based services. Examples of these services may include your email provider, disk space for your computer data backups, or a place to store all of your music, television shows, movies and contacts to keep various portable devices synchronized with the same content. These services may be free to a point, with enhanced or premium services requiring a flat-rate monthly fee. The public cloud can be a very good place for the general consumer who does not have the same requirements as an organization.

Private clouds are generally suited to providing organizational cloud-based services where a more industrial strength Service Level Agreement (SLA) may be needed. A private cloud provider can provide an SLA to an organization that meets specific hosting requirements for reliability, availability, security, maintenance and management features, especially one that must protect confidential, proprietary and individually identifiable information (CPI) where a public cloud provider will be challenged to do the same.

Hybrid clouds generally consist of a mix and match of public and private cloud-based services.

Relocating your data center into the CBS data center has the potential to provide your organization with many benefits including the reduction of your overall IT burden in terms of time and dollars.

"We created a cloud-based learning environment for our computer science curriculum that provides our students with access to modern virtual server and desktop technology without requiring a large capital investment."

Dr. Ray Klump
*Math/Computer Science
Chairman, Lewis University*
